The concept of a neurochemical imbalance of neurotransmitters became the favored explanatory model for psychiatric disorders. Interestingly, at the same time as psychiatry for the first time used effective medications, the movement of antipsychiatry emerged. It was part of a more general political protest against tradition starting in the 1960s and declared "mental illness as...

The **DSM-2** was constructed in 1968 and then moved towards a shift to biological psychiatry, away from a Freudian style of psychiatry that was popular early on in the DSM. Something significant happened in the 1980s. Help us to understand a little bit about that shift towards biological psychiatry.
