The foam rocket receives its push from the snap of the rubber band. This is a good demonstration of Newton's Third Law of Motion - every action has an equal and opposite reaction. The force produced by the rubber band causes an equal and opposite reaction in the foam rocket causing it to take flight.

The Things That Fly in the  
Night explores images of

vampirism in Caribbean and  
African diasporic folk  
traditions and in  
contemporary fiction.

Giselle Liza Anatol focuses  
on the figure of the  
soucouyant, or Old Hag—an  
aged woman by day who sheds  
her skin during night's  
darkest hours in order to  
fly about her community and  
suck the blood of her  
unwitting victims. In  
contrast to the glitz,  
glamour, and seductiveness  
of conventional depictions  
of the European vampire, the  
soucouyant triggers unease  
about old age and female

power. Tracing relevant folklore through the English- and French-speaking Caribbean, the U.S. Deep South, and parts of West Africa, Anatol shows how tales of the nocturnal female bloodsuckers not only entertain and encourage obedience in pre-adolescent listeners, but also work to instill particular values about women's "proper" place and behaviors in society at large. Alongside traditional legends, Anatol considers the explosion of soucouyant and other vampire narratives among writers of Caribbean and African heritage who in the past twenty years have rejected the demonic image

of the character and used her instead to urge for female mobility, racial and cultural empowerment, and anti colonial resistance. Texts include work by authors as diverse as Nobel Laureate Toni Morrison, U.S. National Book Award winner Edwidge Danticat, and science fiction/fantasy writers Octavia Butler and Nalo Hopkinson.

to make a new life in America, overcome gender stereotypes, be the first in her family to go to college, and overcome her fear of flying. After becoming a pilot, Shaesta made the flight of a lifetime by crossing five continents, making thirty stops in twenty-two countries across nearly 25,000 nautical miles. At the age of thirty, Shaesta was the youngest woman and the first from Afghanistan to circumnavigate the globe by herself in a single-engine aircraft. *Fly, Girl, Fly!* is the first authorized picture book biography of Shaesta Waiz. better drone pilots, and incidentally it will have applications in almost any robotics project. Why Arduino? Makers know Arduinos and their accessories, they are widely available and inexpensive, and there is strong community support. Open source flight-control code is available for Arduino, and flying is the hook that makes it exciting, even magical, for so many people. Arduino is not only a powerful board in its own right, but it's used as the controller of most inexpensive 3d printers, many desktop CNCs, and the majority of open source
